¹In industry, even significant items were not necessarily published externally: e.g. [217] was a complete definition of ALGOL 60 using “functional semantics”; [209] introduced the concept of “implementation bias”; [222] introduced the “exit” idea; and [213] was the key output of the denotational semantics definition of PL/I (which marks the start of VDM as a language definition method).

²[208] is my D.Phil. Thesis.
